DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on December 8, 2009 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of United States Patent 7,450,237 has been reviewed and is accepted. The terminal disclaimer has been recorded.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 9, the word "comprising" is changed to "comprises" in line 19 to correct a grammatical error.

Allowable Subject Matter

Claims 1-6, 8-14, and 16-29 are allowed in view of the prior art.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a device for noninvasive detection of the properties of a medium by interferometry, the device comprising, among other essential features, means for measuring variations in the phase of the light beam during its passage through the region to be probed, these means comprising an interferometer with means for servocontrolling the path lengths of the

Art Unit: 2877

reference beam and probe beam, the servocontrolling being up to a cutoff frequency, with the means also having a signal sampling frequency, wherein the device further includes means for scanning the region to be probed and a reference region with an image acquisition frequency for images recorded by means for measuring the variations in the phase of the light beam above the cutoff frequency, and in combination with the rest of the limitations of the above claim.

As to claim 9, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a method of noninvasively detecting the properties of a medium by interferometry, the method comprising, among other essential steps, servocontrolling respective path lengths of a reference and probe beam in an interferometer using means for performing photodetection; and acquiring images corresponding to a measurement of the phase shift at various points in a region to be probed with the photodetection means, at a signal sampling frequency above a cutoff frequency for servocontrolling the respective path lengths of the reference beam and probe beam, wherein the method further comprises the step of scanning the region to be probed and a reference region with the probe beam at an image acquisition frequency for images recorded by means for measuring the variations in the phase of the light beam above the cutoff frequency, and in combination with the rest of the limitations of the above claim.

These claims are also allowable in view of the terminal disclaimer regarding US Pat. 7,450,237 as indicated above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
